

HOMEWORK AIRPORT FINANCES

1. Calculate the total operating expense per enplanement (i.e. passenger) for each OEP-35 airport and make a chart showing the results
 - Which airports are the highest? Discuss some reasons why this may be the case.

2. Calculate the passenger airline aeronautical revenues per enplanement for each OEP-35 airport and make a chart showing the results
 - Which airports are the highest and lowest?
 - Are the airports with the lowest passenger airline aeronautical revenues per enplanement automatically the most attractive to airlines (explain your answer - why, or why not)?

3. Calculate the total non-aeronautical revenue per enplanement for each airport and make a chart showing the results
 - Which airports are the highest?
 - What might be some reasons why those airports are the highest?
